

Diffusion Illusions: Rotating Overlays

Print these pictures, cut them out, and put one on top of the other. Then shine a light through them as you rotate them past each other. You'll see different images! This document can be found at ryanndagreat.github.io/DiffusionIllusions.

You can get these pictures from the website too, by right clicking on the rotating overlay images and opening in a new tab! Then you can resize them as you wish if you want a bigger version of these. Good luck have fun! – Ryan Burgert
